I. INTRODUCTION

RATIONALE

The QA internship that I pursued at 1902 software development corporation allowed me to learn on practices in the testing phase for real world cases in staging and live productions. Furthermore, this revealed to me the development side and the reliance of the testing team. With the hands-on testing activities, I was able to understand how quality assurance plays a critical role in identifying issues before deployment and in maintaining system stability after release. This specific internship has a significant influence on assimilating more on various IT career paths beside typical developer or technical support positions or roles. It tapped to evolve or hone my skillset on establishing software quality, process improvement, error handling, and problem-solving issues.

I. INTRODUCTION

WORK/TRAINING/PROJECT EXPECTATIONS

- The possible expectations I think that the 1902 offers for the QA Intern position responsibilities entail mainly creating test cases towards front-end (UI) and functional testing. The test cases mostly comprise the anticipated contents that are put into effect by providing solutions to each of the issues at hand. It would be redundant on tasks and expect to fix bugs on status, as well as communicating in consistent meetings with developers. Moreover, able to learn on testing approaches, apply test metrics, integrate test framework, and create documentation. On that note, a stepping stone on networking with professionals and exhibit testing on a multitude of software systems or applications of real world client projects.

I. INTRODUCTION

WORK/TRAINING/PROJECT EXPECTATIONS

- In this internship opportunity, it is expected that I will gain a clearer understanding of the SDLC or software development lifecycle and primarily the role of quality assurance within it while gaining the basic premise of foundational knowledge in test design, execution, reporting, and analysis. I also expect to develop hands-on experience in executing different types of testing, tracking and validating defects, and verifying fixes in coordination with stakeholders. Ergo, I can confidently indicate that I've strengthened skills such as attention to detail, teamwork, problem solving, leadership, and improved professional work ethic in a real-world software testing and development setting.

II. ORGANIZATIONAL PROFILE

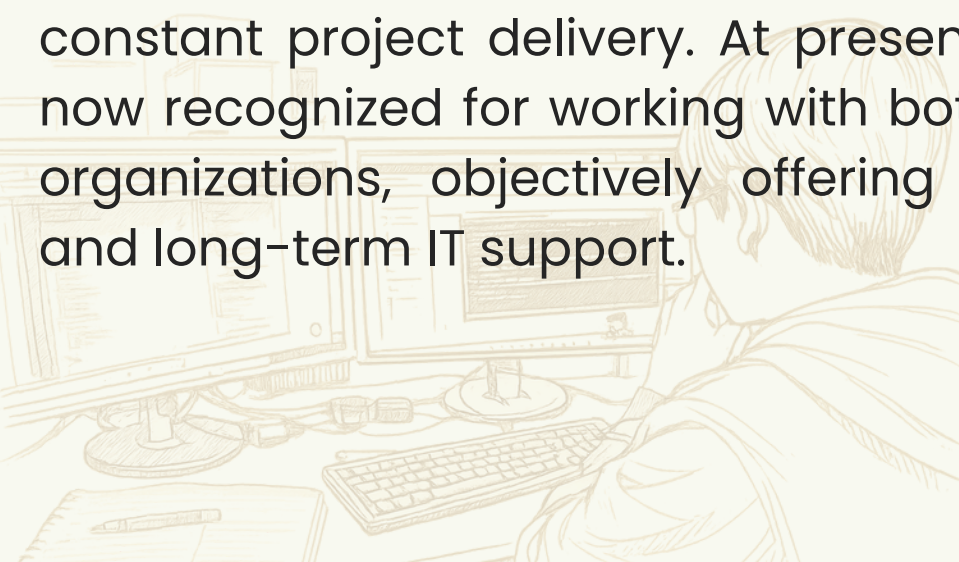

ORGANIZATION HISTORY AND BACKGROUND WITH MISSION AND VISION

1902 Software Development Corporation was founded by Peter Skouhus as an IT services company founded in 1998 and currently headquartered in Muntinlupa City, Philippines. The organization was formed with the goal of delivering reliable, cost-effective, and high-quality software solutions to international clients, particularly in Europe, through offshore development. It started by providing specialist programming services using AutoLISP for AutoCAD and Visual Basic, then gradually expanded to keep up with the consistently changing technology trends by adopting Classic ASP (1999), .NET (2003), PHP (2007), and to the content management systems like WordPress (2010) and Umbraco (2013) as well as e-commerce platforms such as Magento and WooCommerce. In 2012, the company established a mobile app division, initially developing native apps for iOS and Windows and then Android, later adding cross-platform development such as "Xamarin".

II. ORGANIZATIONAL PROFILE

ORGANIZATION HISTORY AND BACKGROUND WITH MISSION AND VISION

The company's name 1902 was derived from both historical inspirational and strategic considerations. It honors the entrepreneurial achievements of Peter's grandfather, who built a successful business in Denmark in 1902. Second, the owner, Peter, wanted for the company's name to appear on top of any listing, which is why it begins with a number, and with number "1". The organization was officially established as a corporation in 2001. They have delivered 1000+ web and digital projects for more than 1000 clients worldwide, maintaining a 98% client satisfaction rating and serving markets including Denmark, Australia, New Zealand, the UK, and Asia with today having on-going constant project delivery. At present, the company is now recognized for working with both small and large organizations, objectively offering custom solutions and long-term IT support.

II. ORGANIZATIONAL PROFILE

MISSION

Its mission statement in core principle or main concept emphasizes high-quality, cost-effective development, long-term client partnerships, and continual training of its Filipino technical team.

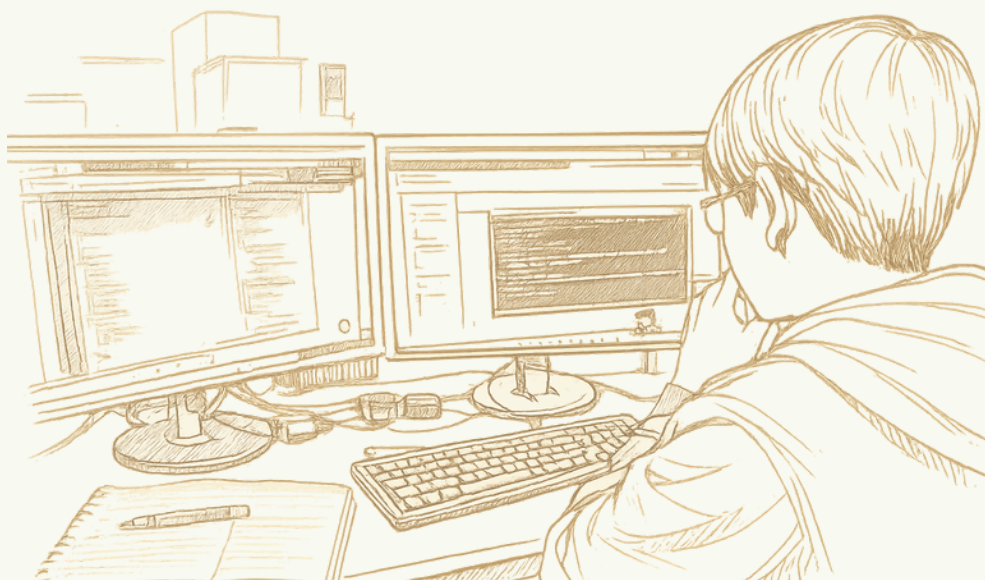

- To do repeat business with our clients year in and year out.
- We achieve our mission by:
 - Retaining our employees for a long time. We can only succeed if we build a harmonious company with dedicated employees, ultimately benefiting clients, company and employees alike.
 - Staying on top of new developments within our business area.
 - Refining our products and adding value to them. We do not want to be “just another third world exporter of raw materials.”
 - Improving the image of products made in the Philippines by making a cost-effective quality product.
 - Training our employees to give 100% attention to consistency and detail. Embracing globalization as a once in a lifetime opportunity, and not an adversary.

II. ORGANIZATIONAL PROFILE

VISION

Even though there's no direct or explicit and constructed vision statement of 1902, the following discusses the connotation as an IT solution provider regarding its entire purpose and goal.

"To be a globally recognized software solutions partner that empowers businesses worldwide to expand and prosper in the digital age by providing innovative, distinctive digital services through outstanding professionals, open collaboration, and affordable technology".

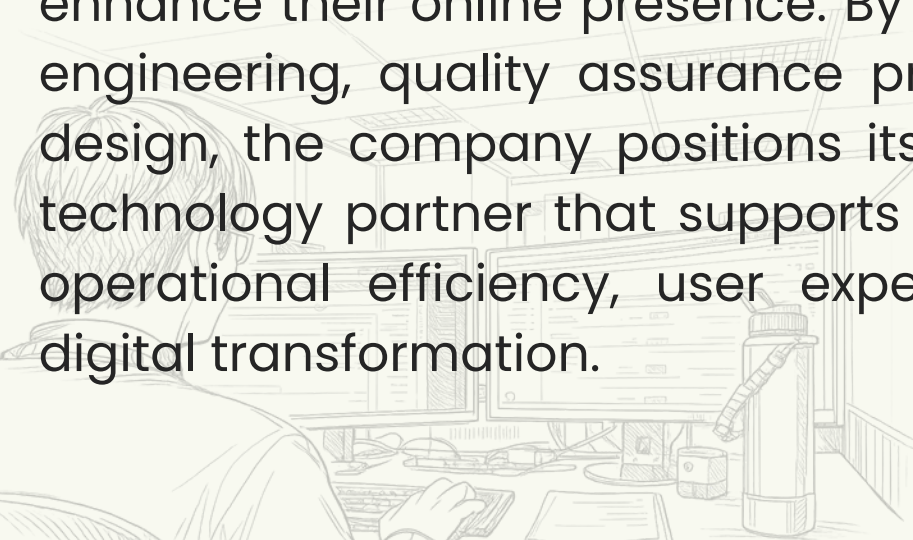

II. ORGANIZATIONAL PROFILE

NATURE OF BUSINESS

1902 Software Development Corporation is a Danish-managed information technology and software services provider company that specializes in catering customized digital solutions for local and notably international clients. The company's core business focuses on the design, development, testing, and maintenance of both web-based and mobile applications that are tailored to meet specific business needs. It provides end-to-end software development services, covering system analysis, UI/UX design, front-end and back-end development, quality assurance testing, deployment, and ongoing technical support. In addition, 1902 Software works extensively with content management systems and e-commerce platforms such as WordPress, Umbraco, Magento, and WooCommerce which assist businesses to set up and enhance their online presence. By combining software engineering, quality assurance practices, and digital design, the company positions itself as a full-service technology partner that supports clients in improving operational efficiency, user experience, and overall digital transformation.

II. ORGANIZATIONAL PROFILE

NATURE OF BUSINESS

- IT and software development services
- Custom web and mobile application development
- E-commerce platform development (e.g., *WooCommerce*, *Shopify*, *Magento*, and *etc.*)
- Content management system (CMS)
- Graphic design and UX/UI design services
- Ongoing support, maintenance, and several IT solutions

III. OBSERVATIONS

ORGANIZATION'S ADVANTAGES

- 1902 Software Development Corporation firstly maintains a strong focus on quality and testing culture by treating software quality as a core value rather than a final development step. This explains the company consisting of a whole dedicated team in production for IT and its departments, generally the development design, support, and especially without neglecting the testing and documentation team. In addition, QA interns are immersed in real-world testing scenarios where accuracy, reliability, and user experience are prioritized. Second, the company follows structured QA processes and standards, including test case creation, bug tracking, regression testing, and validation cycles that allow interns to learn industry-relevant practices aligned with professional software development environments. The third competitive advantage is through the use of modern tools and platforms such as issue management trackers and WordPress-based live systems which should develop technical proficiency and tool familiarity. Fourth advantage indicates the mentorship and guided learning from experienced QA and development professionals that help interns improve their testing techniques, attention to detail, and critical thinking skills. It enables the ability to analyze edge cases, identify inconsistencies, and adopt an end-user perspective essential for a successful QA career.

III. OBSERVATIONS

OVERALL OBSERVATION

- The observations that I keenly took critically is the association or joint effort of the team such as the testers to the development team. The role of a QA does focus on the issues only and testing really does take time to perform. However, there are minimal responsibilities which limit the learning curves and points for internships where all tasks are for front end testing only. Also, although this type of company encourages to be more tacitly inquisitive towards a task, the QA supervisor does not support or appreciate answering any kind of questions. I've recognized how testing works in 1902 and for [writetext.ai](#). The testing process is systematic or heavily automation-driven and repetitive that mainly does verifying in regression for improvement changes and functional for new features added. These are observed how QA ensures product stability before and after each monthly release, especially in WordPress and WooCommerce environments. This exposed me to real-world QA scenarios where even minor changes in versions, plugins, or languages could result in test failures and new issues.

III. OBSERVATIONS

OVERALL OBSERVATION

- Concerning the general aspect of working in a corporation, Time Trackers in the Bitrix platform suggest that these will be implemented everywhere as a standard in most companies that we should be habituated to early on. The company ambiance demonstrates the importance of work zen or professional mindfulness approaches (e.g., no phone rule, first name basis - shows a supporting environment that reduces hierarchy discernment). This brought me to acquire the discipline, work ethic on productivity, and a clean workspace/station.
- From the tasks I personally handled, I learned that effective QA work requires strong analytical or critical skills, attention to detail, and consistency rather than speed alone. Although responsibilities were limited mostly to front-end testing and mentorship of the QA supervisor was ineffectively minimal, it pushed me to realize to become more independent in debugging failed tests, identifying issues, proposing fixes, and documenting technical keypoints meticulously. These retrospects or hindsights helped me better understand how QA supports the development team before deployment, and plays a critical role in maintaining overall software quality in real production environments.

IV. ANECDOTAL REPORTS

PERIODIC REPORTS

SEPTEMBER  WriteText.ai

Week 1 (September 25–26)

September 25, 2025 (Thursday, Day 1)	- Orientation and proceeded to learn software testing as a concept through several given articles with notes, including the best practices, habits, or principles to follow as QA
September 26, 2025 (Friday, Day 2)	- Familiarized the writetext.ai website and its features - Created a trial account on bugbug.io then simulated or tried some automated testing (learned XPath) on a demo website - Before the town hall meeting, I was given the task of manually testing the new updates in the websites with listing those issues.
Week 1	- In the first two starting days of my Internship, this exhibited the completed orientation and learned the fundamentals of software testing and quality assurance by studying provided articles on QA principles, proper methodologies, best practices or habits, and testing types or relevant terminologies. I familiarized myself with the WriteText.ai website and its features, created a trial account on BugBug.io, and practiced basic automation testing on a demo site, including the use of XPath. Ultimately, I conducted manual testing on newly updated website of WriteText.ai before the town hall meeting and documented identified issues such as the optimizations across different devices on all pages and elements, allowing me to apply my initial QA knowledge in a practical setting.

Week 2 (September 29 - October 3)

September 29, 2025 (Monday, Day 3)	- Manual Testing Optimization on the new version or updates of writetext.ai, especially in mobile devices. - Finished all checking and viewing possible issues each page, found at least approximately 22 bugs.
September 30, 2025 (Tuesday)	Absent (Excused)
Month 1	During this month, I completed my orientation and built a foundational understanding of software testing and quality assurance by reviewing provided articles that discussed QA principles, methodologies, best practices, and relevant terminologies. I also explored and familiarized myself with the WriteText.ai website and its main features. Afterwards, I created a trial account on BugBug.io to practice automation testing, where I performed basic test simulations on a demo site and learned how to use XPath through element inspection. Additionally, I carried out manual testing on newly released updates of WriteText.ai website by checking all pages and elements across different devices, particularly on mostly mobile or tablet. Through this process, I documented approximately 22 identified issues, which allowed me to apply my QA knowledge in a practical environment.

OCTOBER

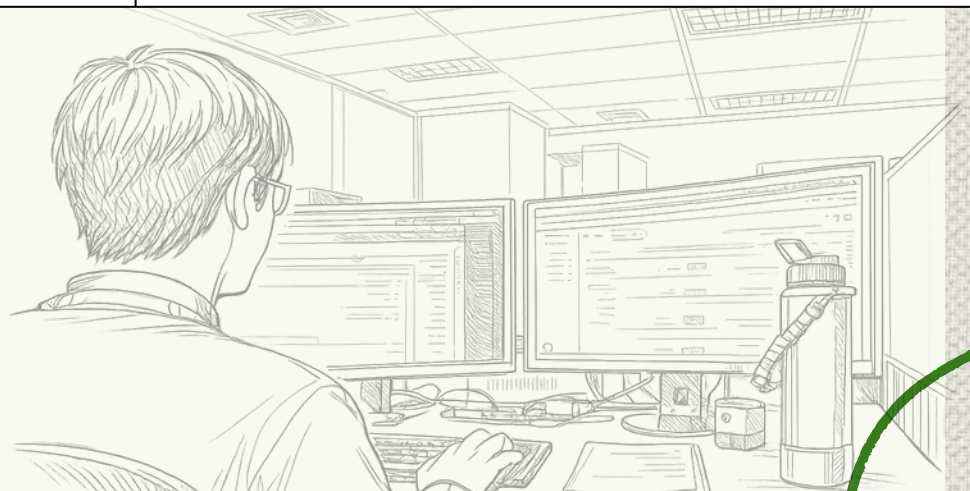

October 1, 2025 (Wednesday, Day 4)	- Bubug.io tool exploration: discovered about the use of assertion and variables of the demo site - Continuation of Bugbug.io Automation Testing: rechecked all passed test features from wordpress website such as filters, verifySorting, verifySearch, and verifyBulkKeywordAnalysis with a total of 9 tests then found 1 fail where its profile was selected of 3.5.8 WTA-CA LIVE/DEFAULT - Test Analysis: examined and inspected each of their specific group/component per given tests.
------------------------------------	---

October 2, 2025 (Thursday, Day 5)

- Group Analysis: understanding the functionality of each tet, especially the set Variables and JavaScript by asking Gizelle; including the essence of both WooCommerce and WriteText.ai
- Functional Testing: communicated with aywn in verifying other tests, while taking notes on the latter tests where I learned about custom *created* variables, lists, and etc; updates - xpath, JavaScript, adding steps
- Test Updates: added steps toward few missing features/cases (meta title, product description, product short description) within the lists of Full Automation and Bulk Generation (generate) such as creating custom JavaScript, setting variables (reusable = XPath), and verifying assertions (on the random output displayed on the text field/box) in product grid of [WriteText.ai](#) WordPress; Products_verifyAvailableFields.

October 3, 2025 (Friday, Day 6)

- Reviewing tests and previously noted topics (notes) which is the continued the important to remember as a QA.
- Security testing: verifying tests in 3.5.8 WTA-DA LIVE
- Update Testing: continuing the verified tests through triple checking, so far 9 tests done and found 2 fails,
- Security Update: finished and listed all failed tests on the shared excel file with other QA intern. Furthermore, recheck and fixed the listed failed tests (9 total; 3 has been Resolved already; 1 continuing for product filters with solutions of XPath & Custom JavaScript
- Assertion Update: edit Product_verifyMaxSeedKeyword; and Keyword Analysis - added some stops and assertion for the max of keywords inputted. It should still be tested above 7 keywords, where it wont let the user click more words in the text field/box.

Week 2

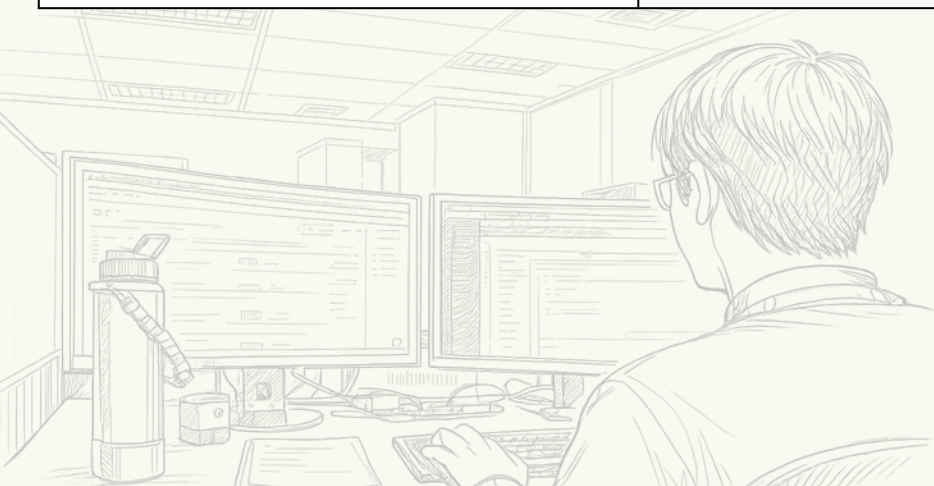

During the Second week, I focused on manual testing and optimization of the latest WriteText.ai updates, particularly on mobile devices, where I reviewed all pages and elements and documented at least 22 identified issues. I continued exploring BugBug.io by learning the use of assertions and variables, rechecking automation tests on the WordPress site such as filters, sorting, search, and bulk keyword analysis, where 9 tests were verified and 1 failure was found under the WTA-CA LIVE/DEFAULT profile. I also performed test, group, and functional analysis by examining components, understanding set variables and JavaScript logic with guidance from senior QA members, and coordinating with teammates to verify additional tests. Furthermore, I updated and enhanced test cases by adding missing steps, reusable XPath variables, custom JavaScript, and assertions for full automation and bulk generation features, conducted security and update testing on WTA-DA LIVE, listed and fixed failed tests in shared reports, and improved assertions related to keyword limits and max seed validation that display QA practices through continuous review.

Week 3 (October 6-10)

October 6, 2025 (Monday, Day 7)

- Fixing Tests in BugBug: reviewing and retesting the passed tests.
- Updating Test in productGrid_fullAutomation: adding assertions and flow.
- Security Failed Tests Update: completed and fixed all of the remaining unresolved ones such as the productGrid_fullAutomation, editProduct_verify DefaultSeedKeyword, and product_filterByStockStatus&Category.
- Test Cases: inputted or outlined some of the process on each group from the given selected tests, where it has 49.

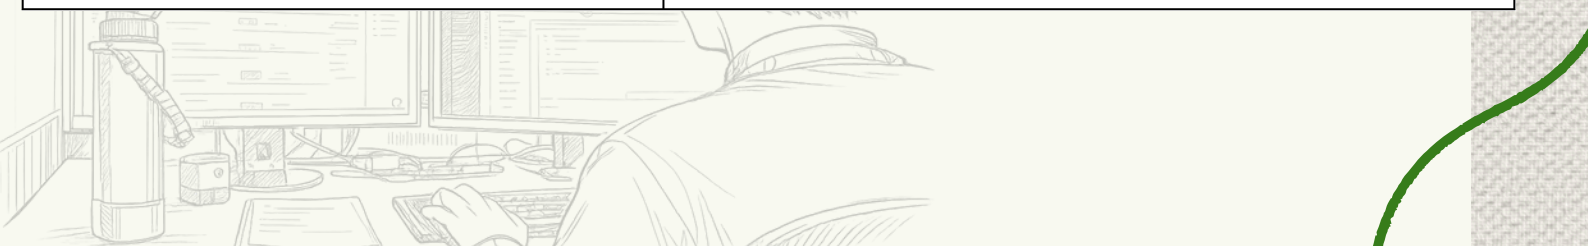

October 7, 2025 (Tuesday, Day 8)	- Test Cases Process: continuing the given task in listing the general operation of the test with deeply understanding each one. - Test Cases List: currently at the midpoint with 22+ processes description. Also, afterwards once those being fulfilled, received another task on devising new test cases.
October 8, 2025 (Wednesday)	Absent (Excused)
October 9, 2025 (Thursday, Day 9)	- Test Case Process Completion: appended new process descriptions with 21 amount (47 test cases process done). However, take note that I've consulted there are two test cases in BugBug which haven't been created yet. - Devise New Test Cases: started with [ROBIN] 2025-10-9_WP-3.5.8_editProduct_verifyCustomTone, the remaining of 7 test cases are still work in progress.
October 10, 2025 (Friday, Day 10)	- Creating Test Cases: added steps of click, type test, assert, and custom JavaScript such as giving functions to the checkboxes. - First Test Case Creation: figuring out the issue with unselecting the custom tone checkboxes, solution: one type test with value (word) which is just for completion or advance - its all right if custom checkbox isn't unselected. - Test Case Creation and Process: completed both the latter test cases along with its process descriptions (editProduct_custom; category grid - text status, created 5 test cases (8 total - other 3 in development/assigned), [ROBIN] 2025-10-9_WP-3.5.8_editProduct_VerifyCustomTone and verifyCustomStyle, [ROBIN] 2025-10-10_WP-3.5.8_categoryGrid_verifyFilterByWriteTextStatus_Transferred, Generated, and notGenerated.

Week 3	This third week focused on improving test stability, coverage, and documentation using BugBug. I reviewed and retested previously passed automation tests, updated the product grid full automation by adding assertions and improving test flow, and resolved all remaining security-related failed tests, including issues in product grid automation, default seed keyword verification, and stock/category filtering. I worked extensively on test case documentation by outlining and detailing processes for selected tests, which completed 49 process descriptions, while noting two test cases that are still pending creation in BugBug. In parallel, I began devising and creating new test cases, starting with custom tone and style verification, adding detailed steps such as clicks, input actions, assertions, and custom JavaScript for checkbox handling. I also completed multiple test cases related to product editing and category grid status filtering.
--------	--

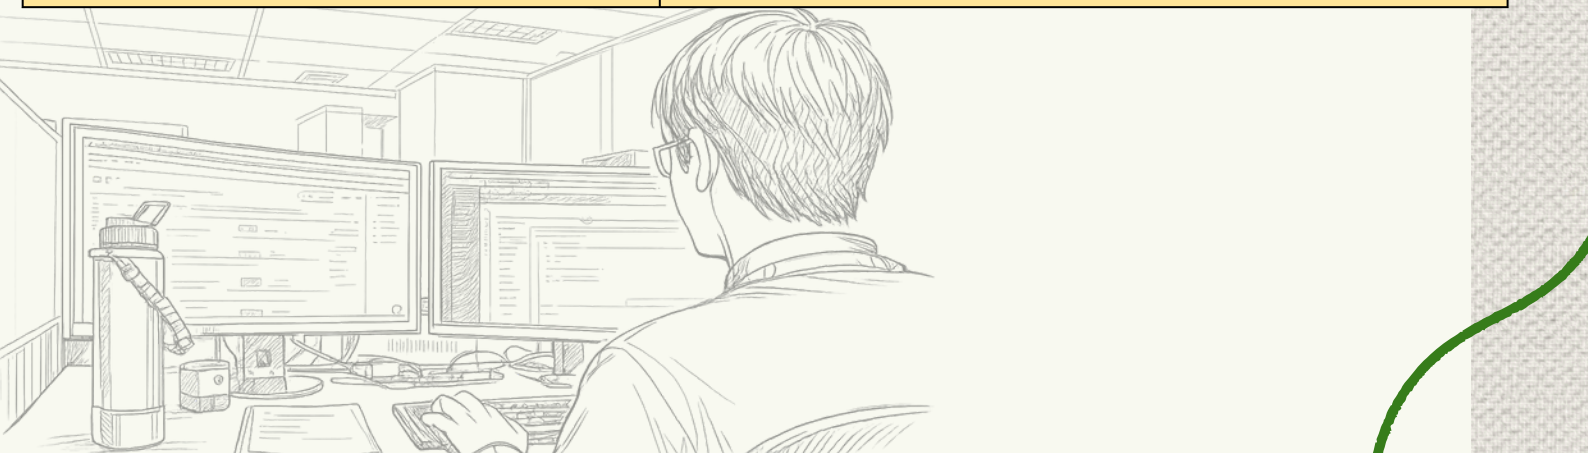

Week 4 (October 13-17)	
October 13, 2025 (Monday, Day 11)	- Test Case Reviews: created the remaining 3 test cases in BugBug, and documented together with its processes & remarks. Also earlier, I've done a bit of refresher course about the loop microsoft and european accessibility act, created 3 new test cases: [ROBIN]-2025-10-13_WP-3.5.8_editCategory_verifyInvalidChracters & Default/MaxSeedKeyword. - Profile Websites: updating plugins, logging Setup (log in), and testing in other profiles in 3.5.8 only such as CA LIVE towards only the test cases I recently created, backend live. - Test Cases Updates: currently finalizing and mending the assert element of generated texts (while in another profile - editproduct, customtone), where it should successfully or correctly view if the element is new. - Improved Test Case: coordinated with gizelle about the issue and understood/embed onn the proer step of assert element is not, switch content tab & context (scroll) and convert the set variables into assert element is not to the next group. - Passed Test: completed checking in at least one profile lanugage that's for CA LIVE, which all new test cases has passed (tested 3 times for custom tone and style).

October 14, 2025 (Tuesday, Day 12)	- Profile Testing: started with WTA-EN and while triple checking with WTA-CA. - Refine VerifyInvalidCharacters: analyzed, found, and updated the new invalid special characters without any tooltip message. Raised about the not yet tested nor created character list. - Repaired custom tone and style: added custom JavaScript in selecting containers for text generation, added assert element for forms if enabled. - Profiles: validated total of 3 such as WTA-CA, WTA-EN, and WTA-FR towards the new test cases. - Renaming: updated all to new version and present date for WordPress test cases, 91 total.
October 15, 2025 (Wednesday, Day 13)	- Reviewing Test: updating assert and xpath in text status filter transferred of WTA-FR. - Template Test Case: used IT staging, updated plugins, setup/log in, added data in backend for the field. - New Test Cases: creating and updating test cases from the list with template field, Created full Automation, bulk generate, transfer history log, and bulk generation alt text - Added process/flow through assertions on current data, text generation, and transferred data to WooCommerce using 3.5.8 WTA-CA Staging (2.1.1)
October 16, 2025 (Thursday, Day 14)	- Fix Test Case: updated full automation, bulk generate transfer history log, and alt text with templates - Added manual assertions instead of JavaScript, productGrid_verifyFullAutomationWithTemplate, verifyBulkGenerateWithTemplateTransferHistoryLog, bulkGeneration_altText. - Retesting: rechecked in the standard IT Staging for the updated test cases, Retested as well in WTA-DA, WTA-CA, WTA-EN, and WTA-FR, particularly for bulk generation alt text. - Issue Handling: working on how to assert the varying or changing results of the transfer history log part from different websites/profiles.

October 17, 2025 (Friday, Day 15)	- Revising Test Cases: added product 2 for bulk generation transfer history log and full automation. - Learned about magento and js code conversion from bugbug. - Compatibility Finalization: retesting the WTA three test cases in several profiles/websites, especially IT Staging. - Regression Testing: verifying if the original test cases haven't been affected, added without templates (done: 2025-10-14_WP-3.5.8_productGrid_verifyBulkGenerateWithoutTemplateTransferHistoryLog and 2025-10-14_WP-3.5.8_editCategory_verifyGenerateWithoutTemplateTransferHistoryLog_metaTitle)
-----------------------------------	---

Week 4	During the 4th week, I've focused on creating, updating, and validating test cases in BugBug, including three new test cases related to invalid characters, default seed keyword, and max seed keyword. I performed profile-based testing across WTA-CA, WTA-EN, and WTA-FR, updating plugins, setting up logins, and verifying backend data in 3.5.8. Test cases were refined with improved assertions, JavaScript adjustments, and proper handling of dynamic elements, ensuring that features like custom tone, style, and bulk generation with templates worked correctly. I triple-checked test results, reviewed transferred data across profiles, and finalized test compatibility in IT Staging. Additionally, I performed regression testing to confirm that original test cases remained unaffected while learning Magento and JavaScript code conversion for BugBug automation. All updated test cases were documented with process flows, remarks, and version updates, ensuring comprehensive QA coverage and accurate validation across multiple environments.
--------	---

Week 5 (October 20-24)

October 20, 2025 (Monday, Day 16)	- Test Case Finalizing: update the remaining without templates for transfer history log, full automation, automatic generate, and bulk generate of both edit product and category in WordPress. - Test Case Organizing: Rename JavaScripts/Groups, Clean deactivated steps. Fixed 48 test cases so far by the approach of Integration testing top-down (currently stopped at 2025-10-14_WP-3.5.8_editProduct_verifyDefaultSeedKeyword).
October 21, 2025 (Tuesday, Day 17)	- Organize Test Case: renamed groups according to their function without any default group or duplicate labels. - Found issues in JavaScript steps of Verify Text Length, Featured Image, and Edited -Date test cases. The elements involved in these steps are no longer applicable or not visible in the new version. - Cleaned by deleting steps or components within groups, added notes on the step after renaming for more details. - Sanity Testing: rechecking test cases after changes such as with and without template bulk generation, - Latest Profile/Variable: updated each one to the current version of "3.5.8" in WriteText AI. - Components Adjustment: deleted and updated 5 unused components that contain 0 unrelated tests.
October 22, 2025 (Wednesday, Day 18)	- Cleaning Components: added 2 more products for set variables, verify bulk generate and transfer. - Gherkin test cases: created syntaxes on WordPress from login, installation, and features of WriteText.ai.
October 23, 2025 (Thursday, Day 19)	- Fixing Test Cases: updating custom tone with proper assert element/javascript cleaning code towards that has a template text generation content. Updated plugins in default and Norwegian (AIO (Pro)) profile. - Gherkin Test Cases: added 6 more which are search, text limit, and transfer functions. - Profile Test Cases: testing all in WTA NO LIVE with their respective SEO plugin. Updated full automation with & w/o template. (Progress: 16 test cases checked).

October 24, 2025 (Friday, Day 20)	- Plugin Testing: profile in NO LIVE, found errors such as edit product default seed keyword and search intent. (62 test cases checked) - Update Issues: fixed verifyDragAndDrop and keyword analysis with assertion steps - Shopify: setup and learned the platform with its backend, shops, and features in contrast to WordPress. - KaneAI: explored LambdaTest and created new test case for product available field.
Week 5	This week focused on finalizing and organizing test cases in WordPress for WriteText.ai, including full automation, bulk generation, and transfer history log tests for both edit product and category functions, with and without templates. I cleaned and renamed JavaScript steps and test groups, removed deactivated or obsolete components, and updated variables and profiles to version 3.5.8. Sanity testing was conducted to ensure functionality across different profiles, while Gherkin test cases were created for login, installation, search, text limit, and transfer functions. I addressed issues in custom tone, text length, featured image, and keyword analysis by updating assertions and cleaning code. Additionally, plugin testing was performed in WTA NO LIVE, fixing errors in default seed keywords and search intent, while exploring Shopify and KaneAI to create new test cases and compare platform functionalities.

Week 6 (October 27-31)

October 27, 2025 (Monday, Day 21)	- Lamdatest: continuing test case for verify available fields. - Issue with modules and even using revert version control still went back to 0 steps. - Kane AI: created modules from initial test case as a workaround due to step bugs of the tool. Also, the other solution is refreshing the test case page each time the module has been edited. - Meeting with dev team of WriteText.AI.
-----------------------------------	---

October 28, 2025 (Tuesday, Day 22)	- Test Case: Bugbug to KaneAI steps, added/fixed modules containing correct step sequence or Javascript snippets and variables for specific elements. - Kane AI: created 7 test cases but still entail with issues. These test cases include such as product of available fields, sorting, pagination, hover preview, filter stock status, and filter category. The productGrid_verifySearch came across to the 0 step bug.
October 29, 2025 (Wednesday)	Absent (Excused)
October 30, 2025 (Thursday, Day 23)	- KaneAI test cases: experimenting and familiarizing the ai tool concepts - Fully passed: WP-3.5.8_productGrid_verifyFilterByCategory - Completed: filter product in stock status, category, stock status & category of in stock, out of stock, and on backorder. Also, added all steps in verify Search test case. - Lambdatest: utilized if and else statement feature as a workaround in kaneai, without much reliance on JavaScript in order to know if it truly passed. - Consulted with lance about variables can't be reassigned for existing ones or be added as empty values.
Week 6	During the 6th week, I continued working with KaneAI in LambdaTest to create and refine test cases, including verifying available fields, sorting, pagination, hover preview, and filters by stock status and category. Due to step bugs in KaneAI, I implemented workarounds such as creating modules from initial test cases and refreshing the test case page after edits. I added and corrected step sequences, JavaScript snippets, and variables for specific elements, while experimenting and familiarizing myself with the AI testing tool's concepts. I successfully completed the WP-3.5.8_productGrid_verifyFilterByCategory test and finalized filter tests for product stock status, category, and combinations of stock status and category. Additionally, I used if-else statements in KaneAI to minimize reliance on JavaScript and consulted with Lance regarding variable restrictions.

Month 2	Throughout the month, I focused on enhancing my QA skills through both manual and automation testing using WriteText.ai, BugBug.io, and KaneAI. I explored BugBug.io features such as assertions, variables, and test case modules, rechecked existing automation tests, resolved failed test cases, and created new ones for product editing, category management, custom tone, style verification, and invalid character handling. I performed functional, group, and security testing across multiple profiles (WTA-CA, WTA-EN, WTA-FR, and IT Staging), adding reusable XPath variables, custom JavaScript, and assertions to improve test reliability and coverage. I also organized, cleaned, and documented test cases, updated plugins, maintained version consistency (3.5.8), and conducted sanity, regression, and compatibility testing. Additionally, I experimented with AI-based automation in KaneAI and LambdaTest, implemented workarounds for tool limitations, and expanded my understanding of WooCommerce, WordPress, Shopify, Magento, and JavaScript integration. By the end of the month, I successfully finalized, validated, and documented over 90 test cases, ensuring comprehensive QA coverage across multiple environments and tools.
---------	--

NOVEMBER

Week 7 (November 3-7)	
November 3, 2025 (Monday, Day 24)	- Test Cases: created filter stocks status on transferred, generated, not generated, and bulk generate meta title & description. - Kane ai issue: workaround to the vertical and horizontal scrolling through JavaScript in order to set variable or get the texts in the product grid.
November 4, 2025 (Tuesday, Day 25)	- Test Case: continued in completing bulk generation for meta title - Updated bulk generate meta title - Created bulk generation description, short description, custom tone, and custom style - Issue update: consulted with Gizelle about the add feature of JavaScript while in the state of pause test and scrolling in product grid bug.

November 5, 2025 (Wednesday, Day 26)	- Test Case: created custom style and default seed - Created max seed, but it procured 0 step bug/parallel session limit. - Issue: fixed random product selection in product grid and lower-case JavaScript variable name - Bugbug: run test cases in profile PHP 8.4 - Updated: [ROBIN] 2025-10-10_WP-3.5.8_categoryGrid_verifyFilterByWriteTextStatus_notGenerated, Generated, and Transferred. - 15/101 checked (found 9 fails)
November 6, 2025 (Thursday, Day 27)	- Bugbug testing in PHP8.4 profile: checked 10 more test cases (given to oliver, since KaneAI went up working) - Kane ai: created test cases for max seed keyword, invalid characters, keyword analysis & with Automatic Generation, bulk generation of open graph text & alt text. - Included JavaScript for close keywords and random search intent.
November 7, 2025 (Friday, Day 28)	- Completed bulk generation alt text for product grid and updated open graph text. - Created test case in product grid of verify custom tone and style. - Created WP-3.5.8_editProduct_verifyGenerateTransferHistoryLog_allFields with 111(105) steps in total.
Week 7	In the 7th week, I accomplished on creating and refining test cases in BugBug and KaneAI, including filter tests for stock status, bulk generation of meta titles, descriptions, short descriptions, custom tone, and custom style. I addressed KaneAI issues such as vertical and horizontal scrolling bugs by applying JavaScript workarounds, fixed random product selection and variable naming issues, and consulted with senior QA for handling paused tests and product grid scrolling challenges. Test cases for max seed, invalid characters, keyword analysis, and automatic generation were created, with additional steps for open graph text and alt text. I updated and executed multiple tests across WordPress (PHP 8.4) profiles and completed complex test cases with over 100 steps that contain comprehensive coverage and proper validation of WriteText.ai features.

Week 8 (November 10-14)

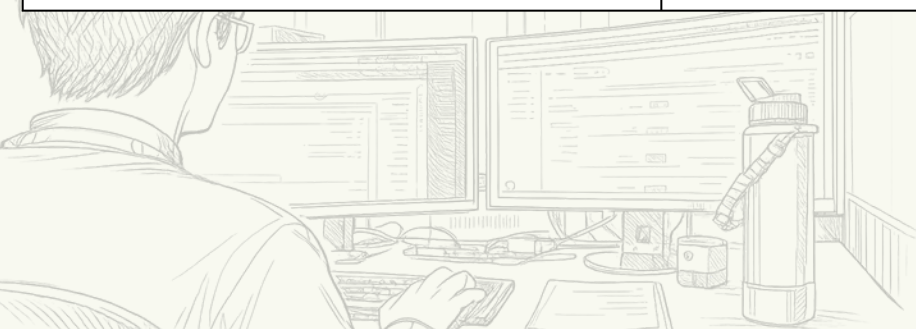

November 10, 2025 (Monday)	Absent (Excused)
November 11, 2025 (Tuesday, Day 29)	- Documentation: listing encountered issues in Kane AI - Presentation: showcased the issues to Gizelle - Updating Documentation: added further steps or information as per examples and issues.
November 12, 2025 (Wednesday, Day 30)	- Test cases: created transfer history log for meta title, meta description, product description, short description, and open graph text. (One complete and the remaining 4 are still work in progress) - WP-3.5.8_editProduct_verifyGenerateTransferHistoryLog_metaTitle, metaDescription, productDescription, productShortDescription, and openGraphText.
November 13, 2025 (Thursday, Day 31)	- Documentation: updated with reference screenshot examples on output translate assertion and If/else statement condition for Kane AI Issues - Test Cases: completed the remaining of edit product transfer history log for meta description, product description, and short description. - Bugbug suites: tested 3 suites in WTA-NO and WTA-PT LIVE Profile - Updating plugins and testing test cases in all profiles
November 14, 2025 (Friday, Day 32)	- Kane AI: updated test case of short description and completed open graph text - Created WP-3.5.8_editProduct_verifyGenerateWithTemplateTransferHistoryLog_metaTitle, but need template options - Bugbug: testing suite of Edit product page: done for WTA-PT Profile - Listing fail and their reasons for 3.7.1-dev in WriteText.AI-WooCommerce. - Ran 92 test cases in WTA-DA.

Week 8	In the 8th week, I fullfied on documenting and addressing issues encountered in KaneAI, then presented to supervisor. Furthermore, updating the documentation with reference screenshots, assertion examples, and If/Else conditions. I created and refined multiple transfer history log test cases for WriteText.ai, including meta title, meta description, product description, short description, and open graph text, completing most of them while some are still in progress. I executed BugBug test suites across WTA-NO, WTA-PT, and WTA-DA LIVE profiles, updating plugins and verifying test cases across all environments. Additionally, I created template-based transfer history log test cases, ran a total of 92 test cases, and documented failures with detailed reasons, ensuring thorough validation of the Edit Product page and maintaining consistent Quality Assurance standards.
--------	---

Week 9 (November 17-21)

November 17, 2025 (Monday, Day 33)	- Bugbug: fixed assertion text content issues (5 test cases) - Kane AI Test Case: added template options in backend - Created/completed with template transfer history for meta title, product description, and short description.
November 18, 2025 (Tuesday, Day 34)	- Kane AI Test Case: updated transfer history log with template for short description - Bugbug: updated wta-en to latest wta version profile and still a work in progress with text assertion in 2025-10-14_WP-3.5.8_editProduct_verifyGenerateWithTemplateTransferHistoryLog_productDescription[3.5.9 ready] [test]
November 19, 2025 (Wednesday)	Absent (Excused)
November 20, 2025 (Thursday)	Absent (Excused)

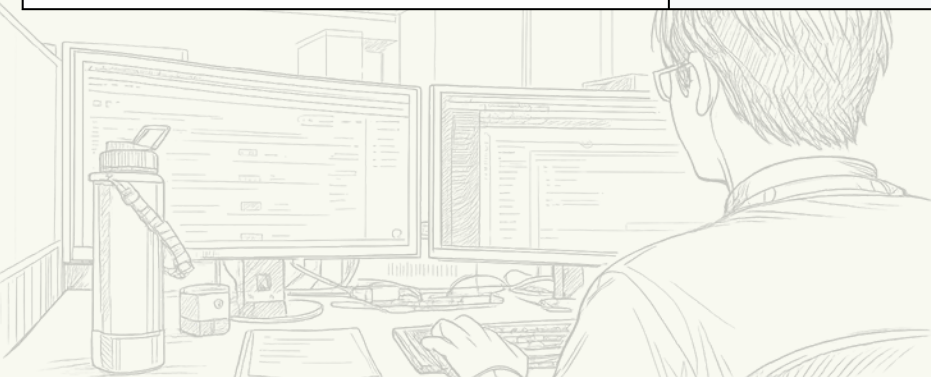

November 21, 2025 (Friday, Day 35)	Bugbug Test Case: updated for transfer history log with template in product description, edit category in invalid characters - Done: [ongoing] 2025-10-14_WP-3.5.8_editProduct_verifyGenerateWithTemplateTransferHistoryLog_productDescription[3.5.9 ready] [test] - and [ROBIN] 2025-11-18_WP-3.5.9_editCategory_verifyInvalidCharacters - Fixed and updated given failed tests with Oliver like [Done] 2025-11-18_WP-3.5.9_products_filterBywriteTextStatus_Transferred_productshDes - cleaned all test cases from disabled steps and renamed group - Meeting with Jen: work evaluation and reminder about issues, policies, and etc.
Week 9	This week, I managed on enchacing and updating test cases in BugBug and KaneAI. First in Bugbug, I fixed assertion text content issues across five test cases, cleaned disabled steps, and renamed groups for better organization. In KaneAI, I added template options in the backend and completed transfer history log test cases for meta title, product description, and short description, including template-based updates. I also updated test cases for product description and invalid characters, addressed failed tests with Oliver, and continued work on WTA-EN profile assertions. Additionally, I attended a meeting with Jen and other interns for discussing our current individual work evaluation and reminders on issues and company policies.

Week 10 (November 24-28)

November 24, 2025 (Monday, Day 36)	- Update/Cleaning Test Case Bugbug: conducted double checking approach - New Automation Tool and Documentation: explored carbonata and testspite.
November 25, 2025 (Tuesday, Day 37)	- TestSpite Documentation: lists down the key features of the tool and how its applicable to WriteText.ai. Still work in progress and already halfway done. - Learned about the backend testing type of test cases process - Bugbug Test Cases: updated 6 with generate in both edit page of product and category using Javascript in handling Invalid Image popup in WooCommerce WP WTA. Still work in progress - Discussed with lance about software methodology and invalid image message handling in woocommerce and shopify.
November 26, 2025 (Wednesday, Day 38)	- Documentation: finished on how testspite works and intended to be relevant on the basis of testing for writetext. - Bugbug: adding, updating, retesting 11 test cases with Javascript for invalid image popups.
November 27, 2025 (Thursday, Day 39)	- Bugbug: fixing test cases for image alt text generation in 3.5.9, Default profile - Testing automation tests in php 8.4 for wta version 3.7 - News regarding lambdatest kane ai from gizelle: stability update and afterwards will test - Cleaned tests (15) through assertion step with and without templates, also category filter columns
November 28, 2025 (Friday, Day 40)	- Bugbug: completed listing failed tests and their errors after testing all in wta version 3.7.1, php 8.4 profile (40 found issues) - Cleaned and rechanged the set variables to JavaScript with throw new error on all [DONE] test cases.

Week 10

During the 10th week, I emphasized on updating, cleaning, and retesting automation test cases in BugBug, using a double-checking approach to ensure accuracy. I updated 11 test cases handling invalid image popups, image alt text generation, and category filters, applied JavaScript improvements, and tested automation in PHP 8.4 for WTA version 3.7. I explored new automation tools, Carbonate and TestSprite, documenting their key features and relevance to WriteText.ai, with TestSprite documentation already halfway complete. Additionally, I coordinated with Lance regarding software methodology and WooCommerce/Shopify error handling, and finished listing failed tests and their errors in WTA 3.7.1, applying fixes and updating variables with JavaScript improvements across completed test cases.

Month 3

For this month, I prioritized on documenting and presenting on the experience of KaneAI as an alternative with BugBug for automation testing. I also created comprehensive test cases in KaneAI, covering features such as stock status filters, bulk generation of meta titles, descriptions, short descriptions, custom tone, custom style, and transfer history logs. I addressed tool-specific challenges, including KaneAI's vertical and horizontal scrolling bugs, 0-step errors, and variable handling, by implementing JavaScript workarounds and consulting with senior QA members. Test cases were executed across multiple WordPress profiles (PHP 8.4, WTA-NO, WTA-PT, WTA-DA), and failures were documented with detailed reasons for continuous improvement. I also enhanced test case organization by cleaning disabled steps, renaming groups, updating assertions, and applying template-based automation for robust coverage. In parallel, I explored and documented new automation tools, Carbonate and TestSprite, including their relevance for WriteText.ai testing. In addition, I coordinated with the team on software methodology, WooCommerce/Shopify error handling, and completed thorough retesting and validation of over 100 complex steps per test case, exercising consistency, reliability, and comprehensive Quality Assurance standards across all environments.

Week 11 (December 1-5)

December 1, 2025 (Monday)	Absent (Excused)
December 2, 2025 (Tuesday)	Absent (Excused)
December 3, 2025 (Wednesday)	Absent (Excused)
December 4, 2025 (Thursday)	Absent (Excused)
December 5, 2025 (Friday, Day 41)	- Bugbug: updated test case on [for updating]2025-12-02_WP-3.5.9_productGrid_verifySearchIntent - Addressed and confirmed issue on double outputs in history log of edit category page, communicated with lance and john, used json formatter - Supplied the domain used, json file, ID, and screenshots of the issue in frontend (website) and backend - Shopify: tested and renamed 5 tests cases in verify keyword using 3.7.1 version store testers 9 - Listed the issues with its details for found 3 fails, and 2 passes.
Week 11	In this 11th week, I updated BugBug test cases such as verify search intent in the product grid, and analyzedd a double-output issue in the edit category history log. I've coordinated with Lance and John and providing detailed JSON files, screenshots, and domain information. I also conducted Shopify testing by renaming five test cases for keyword verification on the 3.7.1 store version, which identified three failed tests and two passes while documenting all issues with supporting details.

Week 12 (December 8-12)

December 8, 2025 (Monday, Day 42)	- Bugbug: updating/verifying test case in shopify - Issue testing and documentation: listing failed test case with its issues of 3.5.11 version in WordPress (work in progress of 35 tests left; double/triple checking each test) - Received another task from lance about the new remarks or changes of the added updates of tests for the newest version of WriteText WooCommerce.
December 9, 2025 (Tuesday, Day 43)	- Bugbug: completed testing and listing 9 found issues all tests in WTA-NO - Completed testing in WTA-DA (47 tests since divided with oliver) by double/triple checking as well, found and listed additional 7 issues.
December 10, 2025 (Wednesday, Day 44)	- Bugbug: verifying the listed failed test cases still contain issues. One test isn't part which is 2025-10-14_WP-3.5.9_productGrid_bulkGeneration_productShortDescription[3.5.9 Ready] - Rechecked, revised, and labeled which tests has the same issues on all 3 profiles (WTA-NO, NL, & DA); verified that 6 tests have similar failed errors or issues - Updated test cases of WP-WC 3.5.9 version in default profile -[for updating] 2025-11-19_WP-3.5.9_editProduct_verifyStyleSelectAndUnselect: fixed with added of tone checkbox sequences -[for updating] 2025-11-27_WP-3.5.9_editProduct_verifyFormal/InternetSpeakLogic_Checkbox: updated on order sequence of tone checkboxes -[for updating] 2025-11-27_WP-3.5.9_editProduct_verifyMinimumSearchIntent, used assert dom on tooltip since its dynamic (flex css attribute), including verifying the text content inside the message box - Testing and listing issues of tests for 3.7.1 version-staging in php 8.4 profile (WP-WTA-DA2). Renaming with [3.7.1 ready] if the test case pass, found 6 issues and currently ran 22 tests so far.

December 11, 2025 (Thursday, Day 45)	- Bugbug update: completed checking and renaming on tests for 3.7.1 version in WordPress WooCommerce (total 43 issues, 43 renamed) - Learned woocommerce in adding of representative products for writetext categories (step 3) - Consulted with lance about loading issue in audience regenerate - Manual testing: checked and recorded the consistency of dropdown field on each of its option across different language sites for mycruise website (dk, se, no, and co.uk).
December 12, 2025 (Friday, Day 46)	- Bugbug testing: checking failed tests, update for set variable output issues through javascript on cleaning texts - Fixed 2 test cases so far such as on edit product/category page components - Visual testing: completed setup for smartui lambdatest - Installed lambdatest smartui in cmd and node.js packages for 1902software.com - Asked gizelle about document and learned about url and specified json in settings - Installed vs code in order to modify json file for the settings configuration such as the urls, browsers, and mobiles - Tested for mismatches in cmd that captures screenshots, set baseline picture to compare when new ones.
Week 12	During the 12th week, I focused on updating and verifying test cases in BugBug for WordPress and Shopify. It further addresses the issues such as double outputs in edit category history logs, tone checkbox sequences, dynamic tooltips, and keyword verification. I performed cross-profile testing across WTA-NO, NL, and DA, documented and resolved 43 failed test cases, and ensured consistency in outputs. Additionally, I conducted manual testing for dropdown field consistency across multiple language sites, learned WooCommerce product setup, and set up SmartUI LambdaTest for visual testing. Those includes a baseline screenshot comparison using JSON configurations towards accurate validation of WriteText.ai features.

Week 13 (December 15–19)

December 15, 2025 (Monday, Day 47)	- Bugbug test case: updated working steps of getting correct text generation outputs with template format in edit page through javascript cleanup code for assertion. Will apply to all other specific tests regarding without any unnecessary html characters - Lambdatest: guided and taught oliver on using smartui such as its setup and then visual regression testing - Created/added more testing on 5 pages screenshots for 1902software website, increased the timer for more accurate mismatches.
December 16, 2025 (Tuesday, Day 48)	- Bugbug updating: updated 10 test cases in edit page for products and categories on both with/without template conditions that clean all text output of set variables (Last test run value) in 3.5.12 version. - Completed scenarios for categories, but still working on the side of product test cases.
December 17, 2025 (Wednesday, Day 49)	- BugBug: updating test cases for edit product text output, completed 1 on all fields but 7 test cases left still needs to be cleaned - Updated plugin and about to test for 3.7.1 version. - Testing and listing issues on tests, specifically for generate, transfer, and keyword analysis first in wta-it site: found 12 issues.
December 18, 2025 (Thursday, Day 50)	- BugBug - completed testing and listing issues of all tests in wta-it 3.7.1 version - Continuing update on clean text outputs for all edit product pages (2 tests fixed through set variables with JavaScript and assertions).
December 19, 2025 (Friday, Day 51)	- BugBug: cleaned text outputs for edit product page through JavaScript on handling special character conditions for template formats such as spaces, punctuations, numbers (decimal), e.g., bullet lists, number lists, units, parenthesis, time (a.m.), dashes, images, and upper/lower case types. - Updated and finished with all tests for edit products, excluding 2025-10-14_WP-3.5.8_editProduct_verifyGenerateWithTemplateTransferHistoryLog_productDescription[3.5.9 ready].

Week 13	During the 13th week, I objectively aim on improving BugBug test cases for WordPress, particularly text generation outputs with template formats by cleaning JavaScript code and assertions to remove unnecessary HTML characters. I updated 10 test cases for products and categories in version 3.5.12, completed category scenarios, and continued cleaning product test cases for special characters, spaces, punctuations, lists, and formats. I also guided Oliver on SmartUI setup and visual regression testing in LambdaTest, captured screenshots for multiple pages on 1902software.com, and tested issues in WTA-IT 3.7.1, identifying and documenting 12 issues for generate, transfer, and keyword analysis functionalities.
---------	--

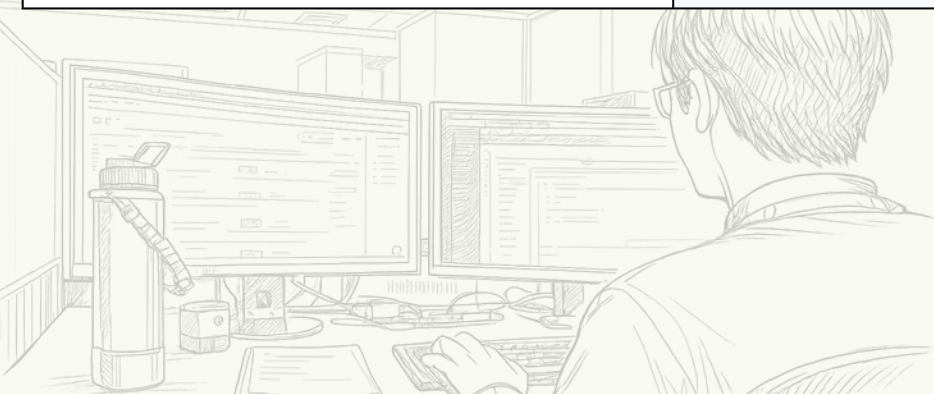

Week 14 (December 22-23)

December 22, 2025 (Monday, Day 52)	- BugBug: update test cases for cleaning product text outputs - Retesting and listing issues on all 90 tests for 3.7.2 staging profile in new 3.7.1 project, found 40 issues - Renamed 50 succeeded tests on its current date and wta version into '2025-12-22_WP-3.7.2' - Update and add of templates in backend.
December 23, 2025 (Tuesday, Day 53)	- BugBug: updating tests from issues and fixed 26/40 so far - Created javascript: Template Tooltip Message (without template option selected) - Added 2 products including its step of set variables and several assertions, replaced with correct xpath/selectors, removed unnecessary elements.
Week 14	For the 14th week, I continually focused on updating and refining BugBug test cases by cleaning product text outputs, adding and managing templates in the backend, and creating JavaScript for template tooltip messages. I retested all 90 test cases in the 3.7.2 staging profile under the new 3.7.1 project, identified 40 issues, and successfully fixed 26 of them. Also, I renamed 50 passed test cases with the current date and WTA version, added two new products with proper set variables and assertions, and optimized XPath/selectors while removing unnecessary elements.

Month 4	Over the 4th month, I mainly concentrated on updating, verifying, and refining BugBug test cases across multiple WordPress and Shopify environments. I addressed issues such as double outputs in edit category history logs, cleaned product text outputs from unnecessary HTML characters, and ensured proper handling of template formats, special characters, and dynamic elements. Cross-profile testing was performed on WTA-NO, NL, DA, IT, and staging profiles, documenting and resolving over 40 issues while renaming and organizing passed tests. I also updated templates in the backend, created JavaScript for tooltip messages, and added products with accurate set variables and assertions. Additionally, I conducted Shopify keyword verification, manual testing for dropdown consistency across multi-language sites, and guided team members in SmartUI LambdaTest setup for visual regression testing, capturing and comparing baseline screenshots to ascertain precise validation of WriteText.ai features.
---------	---

Week 15 (January 12-16)	
January 12, 2026 (Monday, Day 54)	- Bugbug: updating tests in wta-it, 37/40 (will continue on text cleaning since its more of bugbug side issue) - Reported concern of wta side issue in category description filter to lance "fixed" - Added cleaning in history log that handles acronyms space - Testing in wta-en live 3.7.2 version wordpress, progress: checked 51/90 tests and found 5 issues
January 13, 2026 (Tuesday, Day 55)	- Bugbug - completed all testing in wta-en live 3.7.2, double checked errors which found 5 pass and 3 still fail (8 failed tests) - Added template options in backend for product short description - Updated test in [for updating] 2025-12-22_WP-3.7.2_editProduct_verifyLanguageAndCountry - Fixed sequence and added JavaScript for both verification language and country in the settings to edit page (5 profile works - no, fr, sv, pt, nl and 2 needs to be updated - es, de) - Renamed and updated version in profiles to 3.7.2.

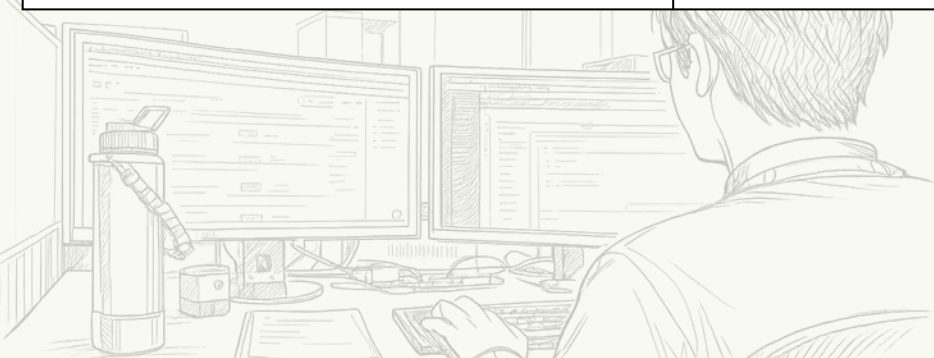

January 14, 2026 (Wednesday, Day 56)	- Bugbug updates: created WPML, Polylang and Default language and country verification tests - Added JavaScript logic to handle WPML scenarios in selecting the correct WriteText language, ensuring its based or matched with the active site language of WordPress (added two ways to assert) - Updated JavaScript that enables the test to function in several language sites dynamically (cleaning characters) - Automation script - brand voice feature in 4.0 version by also duplicating tests (WTA-IT) - Created component for existing Tones & Style as well as verifying the new feature of brand voice in edit product and category page.
January 15, 2026 (Thursday, Day 57)	- Bugbug: creating brand voice tests for with template, bulk generation, and full automation (Progress: 8 BV tests and duplicates for existing tones & style) - Created script (alternative of click step limited to one set variable) that selects one from the multiple checked random set variable items, which then verified brand voice generation active state from grid to edit page - Added steps/groups/components for verifying brand voice and tones & style in bulk generation and full automation in the grid.
January 16, 2026 (Friday, Day 58)	- Bugbug: completed and updated brand voice version tests for with and without template, bulk generate, and full automation. - Fixed text assertion variable value cleaning for short description with template format of several special characters (WooCommerce generation and transfer history log), as well as category description without template paragraph spaces - Created total of 22 brand voice tests, and vice versa to the existing tests for tones and style - Created 7 components for both product and category edit page, grid to window activation & verification state

Week 15	During 15th week, I centered on updating BugBug test cases towards multiple WTA profiles, i.e., IT and EN live 3.7.2 WordPress versions. I addressed issues such as text cleaning in product and category descriptions, handled acronyms and special characters in history logs, and added template options for product short descriptions. I updated and created tests for verifying language and country settings in WPML and Polylang scenarios that uses dynamic JavaScript logic. In addition, I've developed comprehensive Brand Voice tests for both edit product and category pages, including bulk generation, full automation, and integration with existing Tones & Style tests. This correspondingly means I've created as well as 22 tests and 7 reusable components while ensuring proper text assertion and variable cleaning throughout.
---------	---

Week 16 (January 19–23)

January 19, 2026 (Monday, Day 59)	- Bugbug: rechecking Brand voice tests in en and es sites - Setup through the downloaded zip file and uploaded wta 4.0.1-dev to staging plugin in wordpress by replacing current version of 3.7.2 - Added brand voice options in backend of en live - Updated script and steps for language and country WMPL test.
January 20, 2026 (Tuesday, Day 60)	- BugBug: completed and fully working brand voice tests in en site, also ran all testing in fr site for Rank Math SEO Plugin - Created JavaScript handling for set variable of DefaultSelectOption that fixes the issue the existing selected option towards the asserting step of new random option in edit page and grid - Added template and brand voice in backend for fr staging site.

January 21, 2026 (Wednesday, Day 61)	- BugBug: completed and updated brand voice testing in fr staging site - Updated script for spacing on colons, superscript exponents, parenthesis, angle brackets, numbers, percentages, decimals, and etc. - Added brand voice option for es and no in backend - Added 9 more brand voice tests (with a total of 31 tests), especially for category edit page - Updated test case of audience generates for tones and style - Added a list of existing and brand voice tests created for WordPress WooCommerce.
January 22, 2026 (Thursday, Day 62)	- BugBug: updated and tested all brand voices in wta nl staging site, completed testing on 2 other sites and another with rank math plugin - Added bv options of nl in backend staging - Added 3 more brand voice tests (34 total) - Reported issue to lance about checkbox element bug in wta backend - Renamed to 2026-1-22_WP-4.0.1 and cleaned group names of all bv tests - Explored CloudQA.io tool and documented key findings.
January 23, 2026 (Friday, Day 63)	- BugBug: test cases rechecking - CloudQA Tool exploration: created one test case for invalid characters - Completed documentation of the tool - Created csv file of product name list for application variable.
Week 16	In the 16th week, I employed on updating and completing BugBug Brand Voice test cases in several WordPress sites (EN, FR, ES, NO, and NL), while uploading the WTA plugin to version 4.0.1-dev staging. I added Brand Voice options in the backend, updated scripts for language, country, and set variable handling, and verified accurate assertions for edit page and grid testing. A total of 34 Brand Voice tests were created and cleaned, targeting scenarios for categories, tones & style, and audience generation. Then, I explored the CloudQA.io tool and ergo documented key findings. I've created a test case for invalid characters, and generated a CSV file of product names for application variables in the CloudQA.io tool.

Month 5

For the final month, I diligently exerted on updating BugBug test cases in all multitude WordPress sites and WTA profiles. I addressed issues such as text cleaning in product and category descriptions, handled special characters and acronyms in history logs, and added template options for product short descriptions. Furthermore, I've developed and completed comprehensive Brand Voice test cases, including bulk generation, full automation, and integration with existing Tones & Style tests. I've created 34 tests and 7 reusable components across EN, FR, ES, NO, and NL sites. Additionally, I implemented dynamic JavaScript logic for language, country, and WPML/Polylang scenarios, ensured accurate assertions for edit pages and grids, and verified outputs in multiple profiles. Lastly, I also explored the CloudQA.io tool, documented key findings, created a test case for invalid characters, and generated a CSV file of product names for application variables for WriteText.ai website.

IV. ANECDOTAL REPORTS

JOB DESCRIPTION / TASK ASSIGNMENTS

As a Quality Assurance/Software Tester Intern, the job description encompasses for the most part in testing the frontend or user interface and functionality of websites, mobile applications, and other software. However, they changed each intern to handle one specific platform, which I've been designated with WordPress WooCommerce for WriteText.ai.

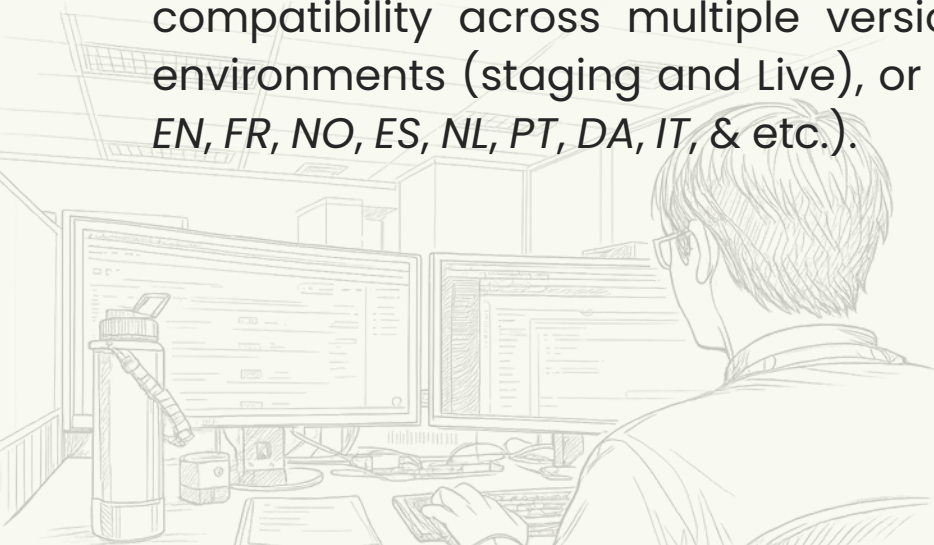

I assisted the Quality Assurance team in testing and maintaining the quality of the WriteText.ai integrations with test cases using BugBug for WordPress WooCommerce and from time to time as for Shopify.

IV. ANECDOTAL REPORTS

JOB DESCRIPTION / TASK ASSIGNMENTS

1.) Automation Testing and Test Case Management (BugBug.io)

- Conducted end-to-end automation testing, which served as the central platform for all testing activities. This included creating, updating, executing, and maintaining automated test cases covering functional, visual regression, integration, security, and sanity testing. Test case creations are based on the WriteText.ai key features such as verifying text generation, bulk generation, full automation, transfer history logs, filters, templates, brand voice, tones, styles, keyword analysis, and language and country settings.
- The responsibilities also involved fixing broken assertions, updating XPath/CSS selectors, setting variables, applying custom JavaScript, organizing groups and creating components, cleaning deprecated steps, and ensuring test compatibility across multiple versions (i.e., current 4.0.1), environments (staging and Live), or language profiles (e.g., EN, FR, NO, ES, NL, PT, DA, IT, & etc.).

IV. ANECDOTAL REPORTS

JOB DESCRIPTION / TASK ASSIGNMENTS

2.) Testing tools exploration

- Explored, evaluated, and set up additional QA and automation tools such as KaneAI (LambdaTest), TestSprite, SmartUI, and CloudQA to assess their viability as an alternative to WriteText.ai testing. These tools were configured and operated through both web-based platforms and local environments such as Visual Studio Code that utilizes Node.js packages for command-line executions and JSON files for configuration of URLs, browsers, and device settings in visual regression testing (SmartUI). I've also created sample test cases that use human language prompts, found tool limitations and workarounds, cited comparisons, and best practices to support informed decisions on the option of explored tools and possible continuous improvement of the QA automation process.

3.) Documentation and Reporting

- Both test cases and tool exploration are recorded with its specified information such as its unique features, detailed findings, identified failed test cases and its system issues during automation runs, screenshots, and notes, and presented results with QA team members. This shows the status of the issue if its open, done, or skipped in order to properly monitor testing progress and ensure that all detected defects are documented for tracking and resolutions (key learnings or continuous improvement phase), then resolved with a number of listed fixes for update.

IV. ANECDOTAL REPORTS

PROBLEMS ENCOUNTERED

1.) **Redundant tasks**

- While withstanding one task procedure of testing in BugBug, everytime the test case run is successful, there won't be anything to learn with the test result just always being green. If it has failed, proposing a solution to the issue within the test case does not always lead to meaningful improvements as the failure may be the cause from tool limitations per se rather than actual system defects.

2.) **Less Collaboration**

- the engagement is mostly limited among interns, with little involvement from regular employees or developers that aren't willingly approachable and appears to indicate the sense to pertaining of not belonging or out of place vibe. There are no scheduled meetings, collaborative discussions, or opportunities to communicate with developers during work hours, breaks, or outside of work. This lack of collaboration—specifically with the QA supervisor—hinders knowledge sharing, mentorship, and exposure to real-world testing.

IV. ANECDOTAL REPORTS

PROBLEMS ENCOUNTERED

3.) **One system only**

- the testing activities are focused solely on one system, which is WriteText.ai. There's no exposure to other official software applications or projects that limits the experience in handling different system architectures, features, and testing scenarios.

4.) **Tool Exploration Bug**

- During tool exploration and research, some testing tools were found to be incomplete or not fully functional. For instance, features such as Carbonate or Test Sprite do not consistently respond to step inputs or properly save test cases. These limitations hinder effective tool evaluation and reduce the accuracy and reliability of test automation experiments.

IV. ANECDOTAL REPORTS

SALIENT PRACTICES

1.) **Test Case Automation Workarounds**

- These are some of the ways to manage test cases where carefully verifying test step sequences to confirm automated tests accurately follow expected functionality output or result. Second, updating xpath/css should be aligned to the current assigned html code attribute name value. Third, upgrading profiles in different languages with system versions, whether live or staging, depends on the implementation schedule or changes of the developers. Fourth, the proper naming conventions, organized grouping, and well-defined test components are consistently applied to improve clarity and consistency. Lastly, the set variables and custom JavaScript outputs are intricately reviewed across diverse automated test scenarios. For example, text outputs should not be html formats but the language readable string that's displayed on the recording of the test process.

2.) **Documentation**

- I've centered on always listing down consistent recording of identified issues that include their causes, impacts, and proposed solutions. This practice supports efficient communication or knowledge transfer within the QA team, helps track recurring problems, and provides useful references for future review of testing activities and system improvements.

3.) **Testing Approach**

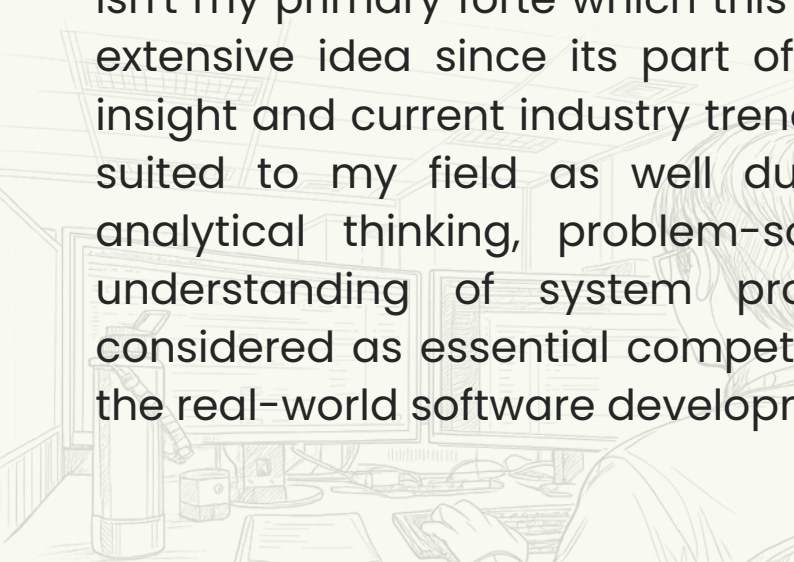

- I've utilized on the black box testing by a top-down approach in executing test cases to verify system functionality from a user's perspective. Even when managing a large number of test cases, each one has a different long runtime where these are thoroughly checked with approaches necessary if it failed or not such as "double or triple checking" while carefully monitoring or reviewing the steps and its result.

IV. ANECDOTAL REPORTS

RELEVANCE TO THE CHOSEN

TRAINING

In modern companies, specifically the IT industry, the common and most integral department that after the developers create the projects would be the testing phase that ensures the stakeholders or user acceptance are upheld. This is why everything and the flow of the system behaves as expected and aligns with the required specifications with improvements by the QA. This equates to further understand the system process, features, and functionality. It allows me to evaluate whether the system performs accurately based on user expectations, including the expansion of learning automation that would boost a set of new skills and techstacks of areas discovered in testing efficiency. Also, the QA role has the ability and seen as with permissible action to decide when to live launch of the versions or approve the system before prod/production deployment. With the goal of preparing myself for the global IT industry, this training is highly related within my course of Information Technology because of how quality assurance verifies and improves around on system applications, even though the testing side isn't my primary forte which this internship contributes to the extensive idea since its part of the SDLC to gain practical insight and current industry trends. When it comes to why it's suited to my field as well due to the fact it enhances analytical thinking, problem-solving skills, and technical understanding of system processes, where these are considered as essential competencies for IT professionals in the real-world software development environments.

IV. ANECDOTAL REPORTS

SUMMARY OF GAINED EXPERIENCE

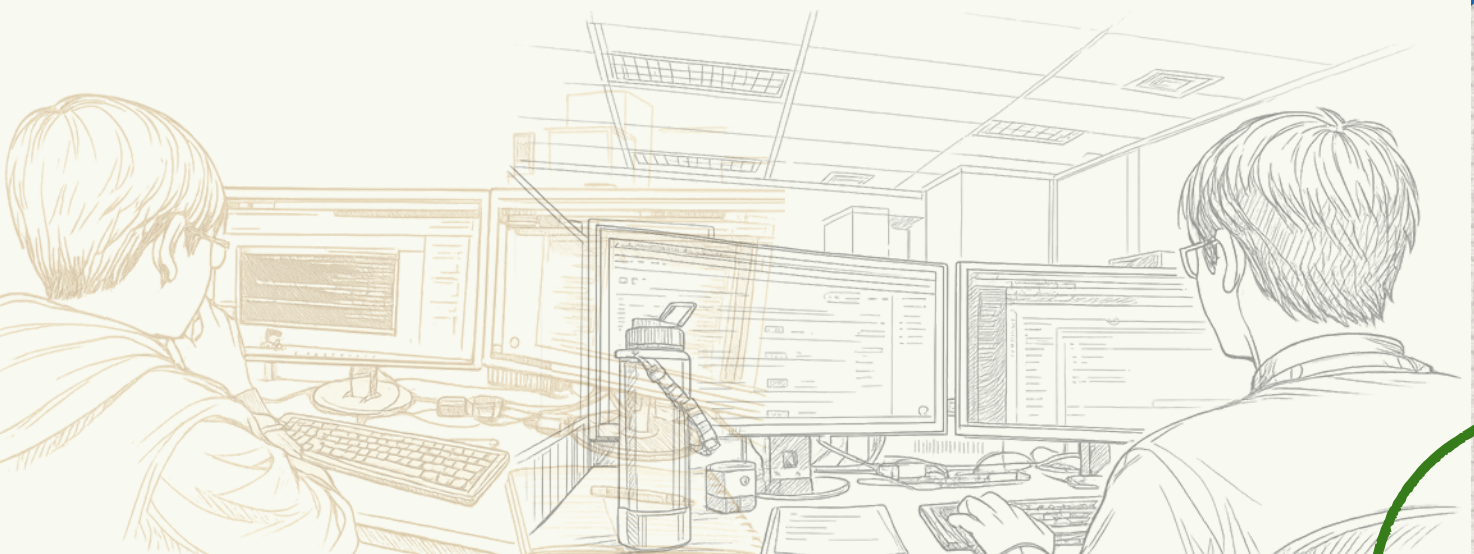

During the course of internship in 1902, the experiences that I've procured are automation testing, software testing procedures, documentation, and quality assurance practices towards the system of **WriteText.ai** in **WordPress WooCommerce**. I developed hands-on experience in creating, running, and maintaining automated test cases using BugBug.io, which strengthened my understanding of functional and visual regression testing. It allowed me to develop patience, attention to detail, and analytical thinking, especially when identifying failed test scenarios and determining whether issues were caused by system defects or testing tool limitations through direct documentation and reporting. I also learned how to provide workarounds for issues by the means of adding custom JavaScripts, fixing misassigned assertions, updating xpath's or css selectors through inspect element, and managing set variables/profiles to test cases that runs efficiently across different system versions, environments, language configurations, and specially key features such as text generation, keyword analysis, bulk operations, full automation, transfer history logs, filters, templates, and etc.

IV. ANECDOTAL REPORTS

SUMMARY OF GAINED EXPERIENCE

Furthermore, the internship allowed me to at least widen my learning beyond routine testing tasks by exploring other alternative technological ai automation tools such as KaneAI, TestSprite, SmartUI, and CloudQA. I was able to experience another way of visual regression testing in SmartUI through both web-based platforms and local environments using Node.js in cmd and JSON configuration files in Visual Studio Code. This is one of the work experiences that encouraged me to think and analyze rigorously when evaluating and documenting tool effectiveness, limitations, and potential improvements in testing the frontend of websites. In conclusion, this internship increased the level of technical understanding of the software testing processes (i.e., test cases and automation tools) and reinforced my appreciation for quality assurance as an essential component in delivering dependable and user-oriented systems. By completing the practicum, I was able to experience the field and explore the industry, while also helping me recognize value areas such as problem-solving and critical thinking where I can further grow as an IT professional.

PRACTICUM RECOMMENDATION LETTER

SOUTHVILLE INTERNATIONAL SCHOOL AND COLLEGE

A member of the Southville Global Education Network (SGEN)

Republic Act 9493
ISC as an Institution of
International Character

1st Organization in Asia to go
straight to 5P GOLD in 2015
United Kingdom

ISO 9001:2015
Certified Quality
Management System
Germany

September 29, 2025

Ms. PAMELA SKOUHUS
Head of Talent and Culture
1902 Software Development Corporation
15th Floor Asian Star Building, Asean Drive corner Singapura Lane
Filinvest Corporate City, Alabang, Muntinlupa City

Madame:

Greetings!

Southville International School and Colleges through the College Division gives its recommendation to **Mr. ROBIN JEROU E. CASTILLO** of the **College of Information Technology and Engineering** for his practicum/internship this First Semester of Academic Year 2025 – 2026

As per academic requirement, he must accomplish **five hundred (500) hours** of practicum relevant in your prestigious organization through an **onsite** approach.

The work coverage must involve but not limited to the following tasks:

- Infrastructure/Network/Server/Database Management
- Preventive Maintenance Tasks
- Technology Tools Assistance
- Internet/Wireless Technology Assistance
- System/Web/Mobile Development

We believe that your organization can provide the relevant exposure to future professionals, thus the continuous supply of highly qualified personnel for the Information Technology industry.

We would highly appreciate whatever assistance you could extend to us that would, in the long run, be both beneficial to the student and your organization.

Thank you very much and we look forward to your kind consideration and support.

Yours truly,

DR. ARIS E. IGNACIO
Dean, College of Information Technology and Engineering

Conforme:

PAMELA SKOUHUS
Sign Over Printed Name

V. APPENDICES

CERTIFICATE OF COMPLETION

January 23, 2026

CERTIFICATE OF INTERNSHIP

This certifies that **ROBIN JEROU E. CASTILLO** rendered 500 internship hours at **1902 Software Development Corporation**, from September 25, 2025, to January 22, 2026. During this period, he performed automated testing using a record-and-replay tool with JavaScript and contributed to test script development and documentation.

The internship agreement between the intern and **1902 Software Development Corporation** was entered by both parties and was completed by the former in compliance with his academic requirements.

Certified by:

Pamela Skouhus
Head of Talent and Culture

PERFORMANCE EVALUATION REPORT

SISC-QSF-DISA-053
Rev 003 10/01/15

SOUTHVILLE INTERNATIONAL SCHOOL AND COLLEGES COLLEGE DIVISION

PRACTICUM PROGRAM EVALUATION FORM

NAME OF COMPANY: 1902 Software Development Corp.

DEPARTMENT/SECTION: QA Department

NAME OF PRACTICUMER: Robin Jerou E. Castillo

COURSE ENROLLED: BSIT EVALUATION PERIOD: FROM SEP TO JAN

NAME OF EVALUATOR: Gizelle de la Vega

POSITION/DESIGNATION: Manager for QA and Documentation

Below is a list of knowledge, skills, and personal characteristics categorized according to SISC's 5 Core Competencies.

In the left-hand column under the heading "Assessment", please indicate your rating of your apprentice's current level of development using the following scale:

5=Very high, 4=High, 3=Average, 2=Low, 1=Very low, 0=Not observed.

I – COMPETENCE

	5	4	3	2	1	NA
1. Possesses knowledge necessary or related to the task(s).		x				
2. Familiar with the requirements and responsibilities of the assignment.		x				
3. Delivers with additional work within a limited period of time.	x					
4. Copes with additional work within a limited period of time.		x				
5. Delivers well-organized and well-researched outputs.	x					
6. Effectively communicates in written and spoken English.		x				
7. Uses documentation software efficiently.	x					
8. Sorts out information and selects critical issues that relate to the situation at hand.			x

SOUTHVILLE INTERNATIONAL SCHOOL AND COLLEGES COLLEGE DIVISION

PRACTICUM PROGRAM EVALUATION FORM

II – CHARACTER

	5	4	3	2	1	NA
1. Accomplishes all work assignments in accordance with company rules and regulations.	x					
2. Exhibits a strong sense of being proactive (i.e. keeping himself informed and anticipating activities).		x				
3. Works efficiently in an organized and clutter free environment.	x					
4. Submits quality output(s).		x				
5. Projects himself/herself in a professional manner (i.e work habits, appropriate dress code, and positive physical projection)	x					
6. Maintains a personality and professional outlook that is worthy of trust and respect.	x					
7. Goes beyond what is expected.		x				

III - COMMITMENT TO ACHIEVE

	5	4	3	2	1	NA
1. Exhibits a strong sense of priorities. Lives out the dictum “duty first before pleasure”.		x				
2. Stays at a task at hand until its completion.	x					
3. Acts with a strong sense of urgency and acts on matters with expediency.	x					
4. Overcomes adversities and works out blocks to achieve goals and objectives.			x			
5. Meets deadlines regularly and consistently.		x				
6. Accomplishes tasks productively, rapidly, and consistently.	x					
7. Manages time effectively.	x					
8. Reports to work on time.	x

SOUTHVILLE INTERNATIONAL SCHOOL AND COLLEGES COLLEGE DIVISION

PRACTICUM PROGRAM EVALUATION FORM

PLEASE INDICATE IN THE SPACE PROVIDED ANY COMMENTS YOU MAY WISH TO GIVE CONCERNING THE APPRENTICE THAT COULD HELP US EVALUATE HIS/HER PERFORMANCE.

He is diligent and responsible. Always tries to finish his tasks as soon as possible. He is
patient as his tasks are quite repetitive but he didn't complain. He informs ahead of time if he will
not be able to report which we appreciate so we can delegate his tasks to others.

PLEASE WRITE ANY SUGGESTIONS WHICH YOU MAY HAVE IN ORDER TO FURTHER IMPROVE THE DEVELOPMENT OF OUR STUDENTS TO MEET THE NEEDS OF COMPANIES SUCH AS YOURS.

Sometimes, he asks questions that can easily be searched or asked AI agents. There were times
that some instructions to be repeated. Maybe because he is still young, but in the real work place,
he should learn to act and think on his own and not ask everything.

WOULD YOU BE WILLING TO ACCEPT APPRENTICES FROM SOUTHVILLE INTERNATIONAL SCHOOL AND COLLEGES AGAIN?

Yes (/) No ()

Gizelle de la Vega

UPDATED RESUME

ROBIN JEROU E. CASTILLO

Putatan, Muntinlupa City, NCR | robinjerouecastillo@gmail.com | 09621792918 | [linkedin.com/in/robinjerouecastillo](https://www.linkedin.com/in/robinjerouecastillo)

OVERVIEW

As an aspiring thinker and IT student with the keenness of implementing and improving systems in relation tapping the business side. Maintain a vision of projects with managing and connecting overall goals and finding a proper tenure career path that will do one's best to increases the value of specifically for the worthwhile future team and company.

EDUCATION

Southville International School and Colleges 2021 - Present
Bachelor of Science in Information Technology with Specialization in Artificial Intelligence and Machine Learning

South Mansfield College 2015 - 2021
Elementary Certificate and Highschool Diploma in Accountancy, Business, and Management

EXPERIENCE

Quality Assurance Intern January 2025
1902 Software Development Corporation

- Conducted Testing and Documentation through Automaton, Manual, and Visual Regression Testing approaches mostly with the frontend side.
- Created Test Cases and Solutions on various issues, specifically for WriteText.ai, a web-based plugin within WordPress WooCommerce using BugBug, LambdaTest KaneAI, SmartUI, and CloudQA tools.

Website Development July 2024

- Deployed a company hosted website for EEC Travel and Tourism through the implementation of GoDaddy, WordPress, Elementor, and CSS.

S-Combinator Bootcamp June 2023

- Coordinated shared concepts and pitched an SDG solution called "Muscell" with various group members.

Young Entrepreneurs' Convention Bootcamp February 2021

- Devised strategies for a startup company of Kahot.ph in asset liquidation, storage management, and marketing plans.
- Presented an innovated Tree-Free Paper product proposal among the group that displayed initiative.

Robotics Forum & Workshop December 2018

- Built an Arduino project for the timed competition, particularly applying functions through the part of programming.

SKILLS

Technological Literacy

- Microsoft SQL Database Server, Python, Artificial Intelligence (AIML), C#, Power BI, Virtual Machines, HTML, CSS, Networking, and other modern daily tools.

Software Innovation and Testing

- User Research, UI/UX Design Prototypes, and Application Software Testing.
- System Design and Implementation, Business Analysis and Reporting, Business Planning, Budgeting and forecasting.

Performance Approach

- Dedicated Team Collaboration, Attention to Detail, Willingness to Learn, and Multi-tasking.

AWARDS & CERTIFICATIONS
